and livestock
production,
aquaculture, fisheries
and forestry for food
and non-food

products.

Agriculture was the key development in the rise of sedentary human civilization, whereby farming of domesticated species created food surpluses that enabled people to live in cities.

While humans started gathering grains at least 105,000 years ago, nascent farmers only began planting them around 11,500 years ago

Persona's name

Short summary of the persona

The word agriculture is a late Middle English adaptation of Latin agricultūra, from ager 'field' and cultūra 'cultivation' or 'growing'

Modern agronomy, plant breeding, agrochemicals such as pesticides and fertilizers, and technological developments have sharply increased crop yields, but also contributed to ecological and environmental damage. Selective breeding and modern practices in animal husbandry have similarly increased the output of meat

vdepletion
of aquifers, deforestation, antibi
otic resistance, and other
agricultural pollution.
Agriculture is both a cause of
and sensitive to environmental
degradation, such
as biodiversity
loss, desertification, soil
degradation, and climate
change,

Does

What behavior have we observed? What can we imagine them doing?

What are their wants, needs, hopes, and dreams? What other thoughts might influence their behavior?

Sheep, goats, pigs and cattle were domesticated around 10,000 years ago. Plants were independently cultivated in at least 11 regions of the world. In the twentieth century, industrial agriculture based on large-scale monocultures came to dominate agricultural output

oday, small farms produce about a third of the world's food, but large farms are prevalent.[2] The largest one percent of farms in the world are greater than 50 hectares and operate more than 70 percent of the world's farmland

The development of agriculture enabled the human population to grow many times larger than could be sustained by hunting and gathering

Nearly 40 percent of agricultural land is found on farms larger than 1,000 hectares.[2] However, five of every six farms in the world consist of less than two hectares and take up only around 12 percent of all agricultural land.

Agriculture is defined with varying scopes, in its broadest sense using natural resources to "produce commodities which maintain life, including food, fiber, forest products, horticultural crops, and their related services"

It may also be broadly decomposed into plant agriculture, which concerns the cultivation of useful plants,[12] and

Feels

What are their fears, frustrations, and anxieties? What other feelings might influence their behavior?
